

NESC 2012

1.5 day Seminar

Electrical

www.pd-engineers.com

COURSE DESCRIPTION:

Understanding the fundamental requirements provided in the National Electric Safety Code (NESC) is imperative to designing, operating and maintaining a safe and reliable utility system. Personnel need to know how to interpret the NESC, correctly apply the code and recognize when violations exist.

This one and a half day seminar explores the NESC in a clear and efficient way providing attendees with the information to maneuver the code and learn of the 2012 changes. Beginners will not only be trained in the NESC, but will develop perspective and appreciation while current users gain confidence as they deepen their understanding.

Name: _____

Utility: _____

Address: _____

City: _____ State: _____ Zip: _____

Email: _____

Phone: _____

Supervisor Name and Phone:

To REGISTER, send
fax to: 770-453-1411 or
